

YOUR **BROADBAND** SHOULD COME WITH AN UMBRELLA.

Tired of hackers trying to steal your thunder?

Keep your Data and your Internet connection undercover!

TruVista's *Umbrella Easy Protect* keeps your network protected before you fall victim to any cyber attack. With TruVista, you'll have as much lightning-fast data as you want without having to take cover.

TRUVISTA ASSURE. CERTIFIED SECURE.

How it Works

TruVista recently added a Cisco Powered Security solution, *Umbrella Easy Protect* to your network. *Umbrella Easy Protect* is a cloud security service that gives you protection from cyberattacks such as malware and phishing. It protects at the DNS-layer before a threat ever reaches your network.

First Line of Defense

As a secure gateway, *Umbrella Easy Protect* provides the first line of defense against threats on the internet. It blocks these threats before they ever reach your network. *Umbrella Easy Protect* can stop phishing and malware infections earlier, identify already infected devices faster and help prevent data theft.

What attacks are you not seeing?

Hackers are paying attention, and they're matching today's technology innovations with maddening creativity of their own. They've graduated from attacks designed to steal data to extortion hacks that instead lock people out of their data unless a ransom is paid. They manipulate files and sabotage software. They exploit vulnerabilities, intercept split-second online credit card transactions and hack connected devices ranging from security camera to smart watches, skateboards and even cars. Built into the foundation of the internet, *Umbrella Easy Protect* acts as your first line of defense against threats- blocking threats before they become attacks, and securing users anywhere they go.

Unmatched Threat Intelligence

Hackers use the internet to develop, stage and refine their attacks and they leave behind traces like domain names and callbacks that can be analyzed. By enforcing security at the DNS and IP layers *Umbrella* blocks requests to malware, ransomware, phishing, and botnets before a connection is even established- before they reach your network or devices.

The Umbrella Advantage

Umbrella Easy Protect is a platform that delivers the fastest, most reliable and most secure internet experience to more than 100 million users daily. Cisco *Umbrella* powered security delivers 100% reliability worldwide and has been doing so for 12 years.
